

GENERAL ASSEMBLY RETIREMENT SYSTEM  
OF ILLINOIS

ACTUARIAL VALUATION  
AS OF JUNE 30, 2009

October 13, 2009

Board of Trustees  
General Assembly Retirement System of Illinois  
2101 South Veterans Parkway  
P.O. Box 19255  
Springfield, Illinois 62794-9255

Re: **Actuarial Valuation as of June 30, 2009**

Dear Board Members:

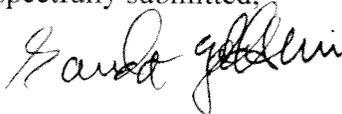

I am pleased to submit our actuarial report on the financial position and funding requirements of the General Assembly Retirement System of Illinois based on the actuarial valuation as of June 30, 2009.

The report consists of 12 Sections and 2 Appendices as follows:

	<u>Page No.</u>
Section A - Purpose and Summary	1
Section B - Data Used For Valuation	1
Section C - Retirement System Provisions	4
Section D - Actuarial Assumptions and Cost Method	4
Section E - Actuarial Liability	6
Section F - Employer's Normal Cost	8
Section G - State Contribution Requirements	9
Section H - Annual Required Contribution For GASB No. 25	11
Section I - Reconciliation of Change in Unfunded Liability	12
Section J - Projection of Benefits, Contributions, and Liabilities	15
Section K - Net Pension Obligation	15
Section L - Certification	19
Appendix 1 - Summary of Principal Provisions	20
Appendix 2 - Glossary of Terms	23

I would be pleased to discuss any aspects of this report with you and other interested persons.

Respectfully submitted,

Sandor Goldstein, F.S.A.  
Consulting Actuary

**A. PURPOSE AND SUMMARY**

We have carried out an actuarial valuation of the General Assembly Retirement System of Illinois as of June 30, 2009. The purpose of the valuation was to determine the financial position and funding requirements of the retirement system. This report is intended to present the results of the valuation. The results are summarized below:

1. Total actuarial liability	\$ 245,226,299
2. Actuarial value of assets	71,573,865
3. Unfunded actuarial liability	173,652,434
4. Funded Ratio	29.2%
5. Employer contribution requirement for FY 11 under Section 5/2-124 of the Illinois Pension Code	\$ 12,058,000
6. Annual required contribution for FY 11 under GASB Statement No. 25	\$ 13,086,199

**B. DATA USED FOR THE VALUATION**

Participant Data. The participant data required to carry out the valuation was supplied by the retirement system. The membership of the system as of June 30, 2009, on which the valuation was based, is summarized in Exhibit 1. It can be seen that there were 181 active members, 275 members receiving retirement annuities, 125 members receiving survivor's annuities, and 1 member receiving a reversionary annuity included in the valuation. The total active payroll as of June 30, 2009 was \$14,611,923.

Exhibit 1

Summary of Membership Data

1.	Number of Members	
	(a) Active Members	
	(i) Vested	139
	(ii) Non-vested	42
	(b) Members Receiving	
	(i) Retirement Annuities	275
	(ii) Survivor's Annuities	125
	(iii) Reversionary Annuities	1
	(c) Inactive Members	78
2.	Annual Salaries (Active Members)	
	(a) Total Salary	\$ 14,611,923
	(b) Average Salary	80,729
3.	Total Accumulated Employee Contributions of Active Members	\$ 12,523,154
4.	Annual Annuity Payments	
	(a) Retirement Annuities	\$ 13,286,996
	(b) Survivor's Annuities	2,909,804
	(c) Reversionary Annuities	6,000

Assets. Public Act 96-0043, signed into law on July 15, 2009, provides that the actuarial value of the System's assets shall be used in determining the required State contribution to the System. Public Act 96-0043 provides that the actuarial value of the System's assets beginning June 30, 2009 are to be calculated as follows:

As of June 30, 2008, the actuarial value of the System's assets shall be equal to the market value of the assets as of that date. In determining the actuarial value of the System's assets for fiscal years after June 30, 2008, any actuarial gains or losses from investment return incurred in a fiscal year shall be recognized in equal annual amounts over the 5-year period following the fiscal year.

We have therefore determined the actuarial value of assets as of June 30, 2009 by recognizing 20% of the unexpected loss from investment return incurred during the fiscal year ending June 30, 2009. The resulting actuarial value of assets as of June 30, 2009 is equal to \$71,573,865. The development of this actuarial value of assets is outlined in Exhibit 2. The market value of the net assets as of June 30, 2009 amounts to \$55,608,635.

Exhibit 2

Actuarial Value of Assets

A. Development of Investment Gain/(Loss) for Fiscal Year for 2009

1. Market Value of Assets as of 06/30/2008	\$ 75,405,943
2. Employer Contributions	8,856,422
3. Employee Contributions	1,697,575
4. Benefits and Expenses	16,205,530
5. Expected Market Value (Based on 8.0% assumed rate of return)	75,565,173
6. Actual Market Value	55,608,635
7. Investment Gain (Loss) (6 – 5)	(19,956,538)

B. Development of Actuarial Value of Assets as of 06/30/2009

8. Market Value of Assets as of 06/30/2009	\$ 55,608,635
9. Investment Gain/(Loss) for Fiscal Year 2009	(19,956,538)
10. 80% of Gain/(Loss) for Fiscal Year 2009	<u>(15,965,230)</u>
11. Actuarial Value of Assets as of 06/30/2009 (8 – 10)	<u>\$ 71,573,865</u>

**C. RETIREMENT SYSTEM PROVISIONS**

The actuarial valuation was based on the provisions of the retirement system in effect as of June 30, 2009 as provided in Article 2 of the Illinois Pension Code. Since the effective date of our last valuation, there have been no changes in the benefit provisions of the system. A summary of the principal provisions of the system in effect as of June 30, 2009 is provided in Appendix 1.

**D. ACTUARIAL ASSUMPTIONS AND COST METHOD**

Actuarial Assumptions

The same actuarial assumptions were used for the June 30, 2009 actuarial valuation as were used for the June 30, 2008 valuation. These assumptions are based on an experience analysis of the system over the four-year period 2002 through 2005. The major actuarial assumptions used for the current valuation are summarized below:

Mortality Rates. For active and retired members: the UP-1994 Mortality Table for Males, rated down 2 years. For spouses: the UP-1994 Mortality Table for Females, rated down 1 year.

Termination Rates. The following is a sample of the termination rates that were used:

<u>Age</u>	<u>Rate of Termination</u>
20 - 65	.070
66 and over	.000

Disability Rates. The following is a sample of the disability rates that were used for the valuation:

<u>Age</u>	<u>Rate of Disability</u>
30	.00057
35	.00064
40	.00083
45	.00115
50	.00170
55 and over	.00000

Retirement Rates. Rates of retirement for each age from 55 to 80 based on the recent experience of the system were used. The following are samples of the rates of retirement that were used:

<u>Age</u>	<u>Rate of Retirement</u>
55	.20
60	.10
65	.08
70	.05
75	.05
80	1.00

The above retirement rates are equivalent to an average retirement age of approximately 60.

Salary Increase. A salary increase assumption of 5.0% per year, compounded annually, was used.

This 5.0% salary increase assumption can be considered to consist of an inflationary component of 4.0% per year and a seniority/merit component of 1.0% per year.

Interest Rate. An interest rate assumption of 8.0% per year, compounded annually, was used. This interest rate assumption can be considered to consist of an inflation component of 4.0% per year and a real rate of return of 4.0% per year.

Marital Status. It was assumed that 75% of active members will be married at the time of retirement.

Spouse's Age. The age of the spouse was assumed to be 4 years younger than the age of the employee.

Actuarial Cost Method

The projected unit credit actuarial cost method was used for the June 30, 2009 valuation. Actuarial gains and losses are reflected in the unfunded actuarial liability. This is the same actuarial cost method that was used for the June 30, 2008 valuation.

**E. ACTUARIAL LIABILITY**

The actuarial liability as determined under the valuation for the various classes of members is summarized in Exhibit 3. The total actuarial liability is then compared with the actuarial value of assets in order to arrive at the unfunded actuarial liability. (The actuarial terms used in this report are defined in Appendix 2.)

As of June 30, 2009, the total actuarial liability is \$245,226,299, the actuarial value of assets is \$71,573,865, and the unfunded actuarial liability is \$173,652,434. The ratio of the actuarial value of assets to the actuarial liability, or funded ratio, is 29.2%.

Exhibit 3

Actuarial Liability As of June 30, 2009

1.	Actuarial Liability For Active Members	
	(a) Basic retirement annuity	\$ 24,116,314
	(b) Annual increase in retirement annuity	7,228,003
	(c) Pre-retirement survivor's annuity	3,136,777
	(d) Post-retirement survivor's annuity	2,956,267
	(e) Withdrawal benefits	8,306,038
	(f) Disability benefits	<u>240,710</u>
	(g) Total	\$ 45,984,109
2.	Actuarial Liability For Members Receiving Benefits	
	(a) Retirement annuities	\$ 149,773,899
	(b) Survivor annuities (Including reversionary)	<u>24,485,746</u>
	(c) Total	\$ 174,259,645
3.	Actuarial Liability For Inactive Members	<u>24,982,545</u>
4.	Total Actuarial Liability	<u>\$ 245,226,299</u>
5.	Actuarial Value of Assets	<u>71,573,865</u>
6.	Unfunded Actuarial Liability	<u>\$ 173,652,434</u>
7.	Funded Ratio	29.2%

**F. EMPLOYER'S NORMAL COST**

The employer's share of the normal cost for the year beginning July 1, 2009 is developed in Exhibit 4. For the year beginning July 1, 2009, the total normal cost is determined to be \$4,390,217. Employee contributions are estimated to be \$1,680,371. The resulting employer's share of the normal cost is \$2,709,846.

Based on a payroll of \$14,611,923, the employer's share of the normal cost can be expressed as 18.55% of payroll.

Exhibit 4

Employer's Normal Cost For Year Beginning July 1, 2009

	<u>Dollar Amount</u>	<u>Percent of Payroll</u>
1. Basic retirement annuity	\$ 1,991,117	13.63%
2. Annual increase in retirement annuity	596,805	4.08
3. Pre-retirement survivor's annuity	275,896	1.89
4. Post-retirement survivor's annuity	237,938	1.63
5. Withdrawal benefits	934,654	6.40
6. Disability benefits	24,407	.17
7. Administrative expenses	<u>329,400</u>	<u>2.25</u>
8. Total normal cost	\$ 4,390,217	30.05%
9. Employee contributions	<u>1,680,371</u>	<u>11.50</u>
10. Employer's share of normal cost	<u>\$ 2,709,846</u>	<u>18.55%</u>

Note. The above figures are based on total active payroll of \$14,611,923 as of June 30, 2009.

## **G. STATE CONTRIBUTION REQUIREMENTS**

Section 5/2-124 of the Illinois Pension Code provides for the following funding plan for the system:

For fiscal years 2011 through 2045, the minimum State contribution to the system for each fiscal year shall be an amount determined by the system to be sufficient to bring the total assets of the system up to 90% of the total actuarial liabilities by the end of fiscal year 2045. In making these determinations, the required State contribution shall be calculated as a level percentage of payroll over the years through 2045. For fiscal year 2009, the total required State contribution was \$8,847,000. For fiscal year 2010, the total required State contribution is \$10,454,000. For fiscal years 2011 through 2045, the State contribution shall be a level percent of the applicable payroll required to bring the total assets of the system up to 90% of the total actuarial liabilities by the end of fiscal year 2045.

Public Act 93-0002, effective April 7, 2003, authorized the sale of \$10 billion in general obligation bonds. On July 1, 2003, the General Assembly Retirement System received \$27,073,983 from the General Obligation Bond (GOB) proceeds. Under the changes made to the funding plan by Public Act 93-0002, the State contribution for each year shall not exceed:

1. The State contribution that would have been required had the GOB program not been in effect, reduced by
2. The total debt service for each year for the system's portion of GOB proceeds

Based on the June 30, 2009 actuarial valuation and the provisions of Section 5/2-124 of the Illinois Pension Code, we have estimated the required contribution for fiscal year 2011 to be

\$12,058,000. We have also estimated the required contribution for the years 2012 through 2015 as well as for fiscal year 2020. The required State contribution rates and amounts are as follows:

<u>Fiscal Year</u>	<u>Projected Payroll</u>	<u>Required State Contribution as a Percent of Payroll</u>	<u>Required State Contribution as a Dollar Amount</u>
2011	\$ 15,188,000	79.39%	\$ 12,058,000
2012	15,743,000	78.73	12,394,000
2013	16,350,000	79.33	12,970,000
2014	16,888,000	79.83	13,482,000
2015	17,407,000	80.30	13,977,000
2020	21,093,000	80.60	17,000,000

Additional details regarding the calculation of the required state contribution as a dollar amount for fiscal years 2011 and later are provided below:

Required State Contribution (in thousands)					
<u>Fiscal Year</u>	(1) <u>State Contribution Under Regular Funding Plan With GOB</u>	(2) <u>State Contribution Without GOB</u>	(3) <u>Amount of Debt Service</u>	(4) <u>Maximum State Contribution (2 – 3)</u>	(5) <u>Actual State Contribution (Lower of 1 and 4)</u>
2011	12,200	14,063	2,005	12,058	12,058
2012	12,646	14,577	2,183	12,394	12,394
2013	13,134	15,140	2,170	12,970	12,970
2014	13,566	15,637	2,155	13,482	13,482
2015	13,982	16,118	2,141	13,977	13,977
2020	17,000	19,532	2,496	17,036	17,000

#### Method of Calculation

The contribution requirements shown above have been determined using the actuarial assumptions, membership data and benefit provisions that were used for the regular actuarial

valuation. However, in order to determine the contribution requirements, certain calculations needed to be made that are not normally required in a regular actuarial valuation. Benefit payout requirements, normal costs, and payroll were estimated over the 36-year period from 2010 through 2045 by projecting the membership of the system over the 36-year period, taking into account the impact of new entrants to the system over the 36-year period.

In order to make the required projections, assumptions needed to be made regarding the age and salary distribution of new entrants as well as the size of the active membership of the system. The assumptions regarding the profile of new entrants to the system was based on the recent experience of the system with regard to new entrants. The size of the active membership of the system was assumed to remain constant over the 36-year projection period.

As provided in Public Act 96-0043, in projecting the actuarial value of assets for future years, we have assumed that the rate of return on the actuarial value of assets would be 8.0% per year. In order to estimate the State contribution that would have been required for FY 2011 and later had the GOB program not been in effect, we first needed to estimate the hypothetical asset value of the system as of June 30, 2009 if the system had not received proceeds from the GOB. We estimated this hypothetical asset value as of June 30, 2009 to be \$28,865,770

#### **H. ANNUAL REQUIRED CONTRIBUTION FOR GASB STATEMENT NO. 25**

GASB Statement No. 25 requires the disclosure of the annual required employer contribution (ARC), calculated in accordance with certain parameters. Based on the results of the June 30,

2009 actuarial valuation, we have therefore calculated the annual required contribution for the fiscal year ending on June 30, 2011. In accordance with the provisions of Public Act 96-0043, in calculating the annual required contribution, we have used the actuarial value of assets with a 5-year smoothing of the unexpected investment loss in Fiscal Year 2009. In accordance with the parameters prescribed in GASB Statement No. 25, we have used a 30-year level percent of payroll amortization of the unfunded liability. On this basis, the annual required contribution for Fiscal Year 2011 has been determined to be as follows:

	<u>Fiscal Year 2011</u>
1. Employer's normal cost	\$ 2,800,224
2. Annual amount to amortize the unfunded liability over 30 years as a level percent of payroll	<u>10,285,975</u>
3. Annual required contribution (1 + 2)	<u>\$13,086,199</u>

#### **I. RECONCILIATION OF CHANGE IN UNFUNDED LIABILITY**

The net actuarial experience during the period July 1, 2008 to June 30, 2009 resulted in an increase in the system's unfunded actuarial liability of \$13,278,306. This increase in unfunded liability is a result of several kinds of gains and losses as illustrated in Exhibit 5.

The employer funding requirement for the year of normal cost plus interest on the unfunded actuarial liability amounted to \$15,029,364, whereas the actual employer contribution for the year amounted to \$8,856,422. Thus, the employer contribution for the year fell short of the

normal cost plus interest on the unfunded liability by \$6,172,942. Had all aspects of the system's experience been in line with the actuarial assumptions, the unfunded liability would have increased by this amount.

The net rate of investment return taken into account based on the actuarial value of assets was approximately 2.51%, in comparison with the assumed rate of investment return of 8.0%. This resulted in an increase in the unfunded liability of \$3,986,959. Salaries increased at a rate of 6.47% in comparison with the assumed rate of increase of 5.0%, resulting in an increase in the unfunded liability of \$760,070.

Salary increases of inactive members who are participants in other Illinois public retirement systems resulted in an increase in the unfunded liability of \$977,739. The various other aspects of the system's experience resulted in an increase in the unfunded liability of \$1,380,596. The aggregate financial experience of the system resulted in an increase in the unfunded liability of \$13,278,306.

Exhibit 5

Reconciliation of Change in Unfunded Liability  
Over the Period July 1, 2008 to June 30, 2009

1. Unfunded actuarial liability as of 7/1/08	\$ 160,374,128
2. Employer contribution requirement of normal cost plus interest on the unfunded liability for the period 7/1/08 to 6/30/09	15,029,364
3. Actual employer contribution for the year	<u>8,856,422</u>
4. Increase in unfunded liability due to employer contributions being less than normal cost plus interest on unfunded liability (2 – 3)	6,172,942
5. Increase in unfunded liability due to investment return lower than assumed	3,986,959
6. Increase in unfunded liability due to salary increases higher than assumed	760,070
7. Increase in unfunded liability due to salary increases for inactive members	977,739
8. Increase in unfunded liability due to other sources	<u>1,380,596</u>
9. Net increase in unfunded liability for the year	<u>\$ 13,278,306</u>
10. Unfunded actuarial liability as of 6/30/09 (1 + 9)	<u>\$ 173,652,434</u>

**J. PROJECTION OF BENEFITS, CONTRIBUTIONS, AND LIABILITIES**

Based on the results of the June 30, 2009 valuation and using the actuarial assumptions used for the valuation, we have projected valuation results for a 36-year period commencing with Fiscal Year 2010. We have based State contributions on the contribution requirements in the funding plan specified in Section 5/2-124 of the Illinois Pension Code. The results of our projections are shown in Exhibit 7.

**K. NET PENSION OBLIGATION**

GASB Statement No. 27 requires governmental employers to disclose the Net Pension Obligation (NPO), the cumulative difference between the annual pension cost and the actual employer contribution. We have therefore determined the Net Pension Obligation as of June 30, 2009 in accordance with the requirements of GASB Statement No. 27. As required under GASB Statement No. 27, our calculations include all fiscal years between December 15, 1986 and June 30, 2009. For each fiscal year, an annual pension cost was determined as the annual required contribution (ARC), one year's interest on the NPO, and an adjustment to the ARC.

The results of our calculations are summarized in Exhibit 8. As can be seen from Exhibit 8, the Net Pension Obligation as of June 30, 2009 was determined to be \$58,550,399.

\* For Fiscal Years 1988 through 1996, the Annual Required Contribution was calculated as the APB-8 requirement of normal cost plus a 40-year level-dollar amortization of the unfunded liability. For Fiscal Years 1997 through 2006, the Annual Required Contribution was calculated as normal cost plus a 40-year level-percent-of-payroll amortization of the unfunded liability. Starting with Fiscal Year 2007, the Annual Required Contribution was calculated as normal cost plus a 30-year level-percent-of-payroll amortization of the unfunded liability.

\*\* Equals Net Liability at Transition.

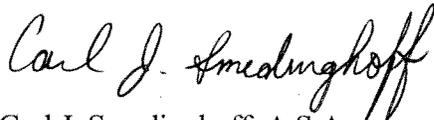

**L. CERTIFICATION**

This actuarial report has been prepared in accordance with generally accepted actuarial principles and practices and to the best of our knowledge, fairly represents the financial condition of the General Assembly Retirement System of Illinois as of June 30, 2009.

Respectfully submitted,

Sandor Goldstein, F.S.A.  
Consulting Actuary

Carl J. Smedinghoff, A.S.A.  
Associate Actuary

Appendix 1

Summary of Principal Provisions

1. Participation. A person eligible for membership must participate in the system as a condition of employment unless an "Election Not to Participate" is filed within 24 months from the date of assuming office.

2. Member Contributions. All members of the system are required to contribute to the system the following percentage of their salaries:

Retirement Annuity	8.5%
Automatic Annuity Increase	1.0
Survivor's Annuity	<u>2.0</u>
Total	11.5%

3. Retirement Annuity - Eligibility. A member who has at least 8 years of creditable service is entitled to a retirement annuity upon attainment of age 55. A member with at least 4 years of service but less than 8 years of service is entitled to a retirement annuity upon attainment of age 62.

A member with at least 8 years of service who becomes disabled while in service is entitled to a retirement annuity regardless of age.

4. Retirement Annuity - Amount. The retirement annuity is determined according to the following formula based upon the member's final rate of salary:

- 3.0% for each of the first 4 years of service, plus
- 3.5% for each of the next 2 years of service, plus
- 4.0% for each of the next 2 years of service, plus
- 4.5% for each of the next 4 years of service, plus
- 5.0% for each year of service in excess of 12

The maximum retirement annuity is 85% of the final rate of salary.

5. Automatic Increase In Retirement Annuity. (a) Annual automatic increases of 3% of the current amount of retirement annuity are provided. The initial increase is effective in the month of January or July of the year next following the year in which the first anniversary of retirement occurs, but in no event prior to attainment of age 60.

(b) Beginning January 1, 1990, for persons who become participants prior to August 8, 2003 and who remain in service after attaining 20 years of creditable service, 3% annual automatic increases begin to accrue on January 1 next following the date the participant attains age 55 or completes 20 years of creditable service, whichever occurs later. For any person who has service

credit for the entire period from January 15, 1969 through December 31, 1992, the increases shall accrue from age 50 instead of age 55. However, such increases shall not become payable until the January 1 or July 1 next following the first anniversary of retirement, or the first of the month following attainment of age 60, whichever occurs later.

6. Survivor's Annuity - Eligibility. A surviving spouse without children is eligible for survivor benefits at age 50 or over provided marriage to the member had been in effect for at least 1 year immediately prior to the member's death.

A surviving spouse with unmarried eligible children is eligible for a survivor's annuity benefit at any age provided the above marriage requirements have been met. When all children are disqualified because of death, marriage or attainment of age 18 or age 22 in the case of a full-time student, the spouse's benefit is suspended if the spouse is under age 50 until the attainment of such age.

An unmarried eligible child under age 18 or under age 22 and a full-time student or over age 18 and disabled may qualify for the survivor's annuity if there is no surviving spouse or if the spouse dies. Legally adopted children are eligible for survivor benefits on the same basis as other children.

If the member dies in service as a member, the member must have at least 2 years of service credit for survivor's annuity eligibility. If death occurs after termination of service but before retirement, the deceased member must have at least 4 years of service credit for survivor's annuity eligibility.

7. Survivor's Annuity - Amount. (a) A surviving spouse is entitled to a survivor's annuity of  $66 \frac{2}{3}\%$  of the amount of retirement annuity to which the member was entitled on the date of death, without regard to whether the member had attained age 55 as of the time of death, subject to a minimum payment of 10% of salary.

(b) If a surviving spouse has in his or her care eligible children, the survivor's annuity shall be the greater of the following:

(1)  $66 \frac{2}{3}\%$  of the amount of retirement annuity to which the member was entitled on the date of death, or (2) 30% of the member's salary increased by 10% of salary on account of each eligible child, subject to a total payment for the surviving spouse and children of 50% of salary. If only unmarried children survive, each such child shall be entitled to an annuity of 20% of salary, subject to a maximum total payment for all children of 50% of salary.

(c) Upon the death of a member after termination of service, or upon the death of an annuitant, the maximum total payment to a surviving spouse and eligible children, or eligible children alone if there is no surviving spouse, shall be 75% of the retirement annuity to which the member or annuitant was entitled.

(d) Survivor's annuities are subject to annual automatic increases of 3% of the current amount of annuity.

(e) The minimum survivor's annuity provided by the system is \$300 per month.

(f) In the case of a proportional survivor's annuity under the Retirement Systems Reciprocal Act, if the amount payable by the system on January 1, 1993 is less than \$300 per month, the amount shall be increased as of that date by \$2 per month for each full year elapsed since the annuity began.

8. Refund of Contributions. Upon termination of service, a member is entitled to a refund of his total contributions without interest.

A member who has no eligible survivor's annuity beneficiaries, or is unmarried at the time of retirement, is entitled to a refund of his or her contributions for the survivor's annuity.

## Appendix 2

### Glossary of Terms used in Report

1. Actuarial Present Value. The value of an amount or series of amounts payable at various times, determined as of a given date by the application of a particular set of actuarial assumptions.
2. Actuarial Cost Method or Funding Method. A procedure for determining the actuarial present value of pension plan benefits and for determining an actuarially equivalent allocation of such value to time periods, usually in the form of a normal cost and an actuarial accrued liability.
3. Normal Cost. That portion of the actuarial present value of pension plan benefits, which is allocated to a valuation year by the actuarial cost method.
4. Actuarial Liability or Accrued Liability. That portion, as determined by a particular actuarial cost method, of the actuarial present value of pension benefits which is not provided for by future normal costs.
5. Actuarial Value of Assets. The value assigned by the actuary to the assets of the pension plan for purposes of an actuarial valuation.
6. Unfunded Actuarial Liability. The excess of the actuarial liability over the actuarial value of assets.
7. Projected Unit Credit Actuarial Cost Method. A cost method under which the projected benefits of each individual included in an actuarial valuation are allocated by a consistent formula to valuation years. The actuarial present value of benefits allocated to a valuation year is called the normal cost. The actuarial present value of benefits allocated to all periods prior to a valuation year is called the actuarial liability.

Under this method, the actuarial gains (losses), as they occur, generally reduce (increase) the unfunded actuarial liability.

8. Actuarial Assumptions. Assumptions as to future events affecting pension costs.
9. Actuarial Valuation. The determination, as of a valuation date, of the normal cost, actuarial liability, actuarial value of assets, and related actuarial present values for a pension plan.
